DIAMA-GUARD HG PLUS

Water-based, High Gloss Sealer
With Microban® Antimicrobial Product Protection

OVERVIEW

Diamapro® Diama-Guard HG Plus is a proprietary water-borne breathable semi-film forming sealer for polished concrete. It helps protect polished surfaces against stains and etching while providing an attractive level of maintainable gloss.

Diamapro® Diama-Guard HG Plus forms a water-resistant barrier that minimizes the penetration of liquids into the surface. This dramatically reduces liquid-borne staining. Colorful dyes will be protected and retain their original color. One application improves stain resistance while simplifying the maintenance and cleaning of concrete surfaces.

ANTIMICROBIAL PRODUCT PROTECTION

Diamapro® Diama-Guard HG Plus is infused with Microban® Technologies. Microban® antimicrobial protection works to combat the growth of bacteria, mold, and mildew on product surfaces. It keeps floors cleaner and reduces odor by reducing damaging microbial growth before it can start. For applications where sanitation is crucial – such as cafeterias, restaurants, supermarkets, healthcare facilities, pharmaceutical labs, schools, restrooms, kennels, and veterinary offices - all Diamapro® treatments with Microban® technologies are the ideal solution.

Diamapro® Diama-Guard HG Plus with Microban® is the only film-forming sealer on the market that offers antimicrobial protection for a polished concrete surface.

FEATURES & BENEFITS

- Semi-Film Forming Near Surface Stain Protector
- Formulated to Protect Polished & Dyed Concrete From Oil & Water-Borne Contaminants
- Ultraviolet Light Blocking Properties to Help Retain Dye Colors
- Low Odor, Non-Flammable & Low VOC (<5 Gr/L)
- Microban® Antimicrobial Product Protection
- Easy Maintenance
- Burnish With 3000 Grit or Higher Diamond Impregnated Pad
- Product Is Ready-To-Use
- Provides Protection in Residential, Commercial and Industrial Applications
