

DIAMA-COLOR

DiamaPro® DiamaColor is a proprietary micro dye formulated to penetrate and impart color. DiamaColor is enhanced with a penetrating aid to ensure a high level of absorption.

UV buffers have been infused into the formula to retain bright and true colors. This is the perfect selection for adding color to a polished concrete surface or in a “dye and seal” process.

DiamaPro® DiamaColor is only available through DiamaPro® Systems Authorized Distributors. Packaged in containers to produce 1 and 5-gallon units.

For a list of Authorized Distributors please contact DiamaPro® Systems.

DIAMA-TINT

STANDARD TINT PACK COLOR CHART for DiamoJoint Fill and DiamoGrout

Grinding and polishing, application of dyes or sealers, and the addition of aggregate can all affect the final appearance of the product. The colors shown are for representational purposes only, cured color samples are available for an exact match.
